Corpus linguistics studies language through large collections of authentic texts. A corpus is compiled according to explicit sampling criteria and annotated with part-of-speech tags, lemmas and syntactic dependencies. Researchers query the corpus with concordance tools and compute frequency lists, collocations and keywords.

语料库语言学以大规模真实文本为基础研究语言使用。语料库按照明确的抽样标准建设，并标注词性、词元和依存关系。研究者使用检索工具查看索引行，计算词频、搭配和主题词。
